

BRIAN DE PINTO

Montclair, NJ | NYC Metro Area | (609) 312-9737 | studio@briandepinto.com
briandepinto.com/tech · github.com/briandepinto · linkedin.com/in/briandepinto

Systems-focused operator with 15+ years managing high-stakes digital production environments where data integrity, speed, and failure prevention are critical. Now specializing in AI systems, automation, and adversarial testing, combining real-world operational experience with hands-on work in prompt security, threat detection, and LLM evaluation. Known for building reliable workflows under pressure and identifying system vulnerabilities.

TECHNICAL SKILLS

Languages & Tools: Python, SQL, Git, Linux, Kali Linux, Wireshark, tcpdump

AI & Automation: Claude, ChatGPT, Microsoft Copilot, Grok, Ollama, Claude Code, prompt engineering

Platforms: Zapier, API workflows, structured data pipelines, macOS, RAID storage, asset management

Security: SIEM concepts, network analysis, DNS/SPF/DMARC, router hardening, access controls

AI SYSTEMS & WORKFLOW DEVELOPMENT

- Designed and deployed multi-model AI workflows (Claude, ChatGPT, Copilot, Grok) to build production-ready tools including automation systems, a gamified web app, and an AI-powered knowledge management platform
- Integrated AI tools into repeatable business workflows using Zapier and API-based systems to reduce manual overhead and improve consistency
- Applied prompt engineering techniques across multiple LLM platforms to optimize outputs for business process automation

PYTHON AUTOMATION & WORKFLOW SYSTEMS

- Built a Python automation system replacing 800+ manual file operations per shoot day, ensuring consistent naming, folder generation, and SKU tracking across complex workflows
- Reduced human error in high-volume asset pipelines; system became the foundation for CaptureSync, a shoot management platform in development

CYBERSECURITY & ADVERSARIAL TESTING

- Built a virtualized Kali Linux homelab to simulate attacks and test system vulnerabilities in controlled environments
- Used Wireshark and tcpdump to analyze traffic, identify anomalies, and study attack patterns
- Conducted adversarial testing on LLM systems, identifying prompt injection patterns and model vulnerabilities
- Configured DNS, SPF, and DMARC to secure domain infrastructure; performed security audits and implemented router hardening and access controls

CERTIFICATIONS

Google Cybersecurity Professional Certificate (2024) | CompTIA Security+ (Expected July 2026)

PROFESSIONAL EXPERIENCE

Photographer, Digital Capture Technician, Lead Technical Director *BDP Photo Inc.*

New York, NY & Global | 2012 – Present

- Built and operated a commercial production practice supporting global clients including Nike, Ralph Lauren, Sephora, L'Oréal, David Yurman, Coach, and Anthropologie across 27 countries
- Operated in zero-failure environments ensuring real-time data capture, redundancy, and asset integrity across high-value productions
- Managed full data lifecycle, capture, validation, backup, and delivery for multi-million dollar productions in remote, high-risk environments
- Designed and enforced workflows focused on consistency, redundancy, and failure prevention across all production stages

Digital Production Manager & Photographer *Untitled NYC / Eileen Fisher (Contract)*

New York, NY | 2024

- Built Python automation scripts generating 800+ folder operations per shoot day with customized outputs, naming conventions, and SKU tracking
- Documented all production processes, built redundant systems, and trained employees to ensure repeatable operations
- Onboarded a major e-commerce brand account at a new studio, developing end-to-end digital production workflow from scratch across five shoot categories and hundreds of SKUs per monthly cycle

ADDITIONAL SKILLS

Professional visual communication and aesthetic direction across major commercial productions. Experienced working directly with global brands, executives, celebrities, and creative directors in high-pressure client-facing environments.
